Dana manages a variety of equity, fixed income, and balanced portfolios for primarily U.S. institutional, individual, and mutual fund clients.
- Composite Creation Date:** June 30, 2014.
- Composite Definition:** The Dana Catholic ESG Small Cap Equity composite includes all fee-paying, discretionary equity portfolios that invest in U.S. equities with the goal of providing long-term capital appreciation within a well-diversified Catholic ESG small cap strategy. - Benchmark Description:** The benchmark for the Dana Catholic ESG Small Cap Equity composite is the Russell 2000 Index.
- Performance and Fees:** Valuations are computed and performance is reported in U.S. dollars. Gross-of-fees returns are presented before investment management and custodial fees but after all trading expenses. The composite contains both traditional commission paying and bundled-fee (i.e., asset-based pricing) portfolios. Trading costs are allocated to bundled-fee portfolios at actual asset-based rates. If actual asset-based trading costs cannot be readily identified, the entire bundled fee (which may include costs for administration, investment management, custody, asset allocation, etc.), net of Dana's investment management fees, is deducted from the gross return. Net-of-fees returns are calculated by deducting Dana's actual investment management fees from the monthly gross-of-fees returns. Dana's current standard annual Catholic ESG Small Cap Equity fee schedule is 0.75% on the first \$10MM, 0.70% on the next \$15MM, and 0.65% thereafter; however, Dana's investment management fees may vary based upon the differences in size, composition and servicing needs of client accounts. Policies for valuing portfolios, calculating performance and preparing compliant presentations are available upon request.
- Standard Deviation:** The 36-month annualized standard deviation measures the variability of the monthly gross-of-fees composite and the benchmark monthly returns for the period. The 36-month annualized standard deviation is not presented for 2014 to 2016 as the periods were less than 36-months from the composite's inception.
- Internal Dispersion:** Dispersion is calculated using the equal-weighted standard deviation of annual gross returns of those portfolios that were included in the composite for the entire year

**Past performance is not indicative of future results.**
